

POWER

to weather the storm.

Alabama and northwest Florida's emergency power provider

Thompson

The Resources You Need to stay in business or get back in business quickly.

According to the NOAA, hurricane activity cycles last about 30 years. That means the heightened activity we are currently experiencing, which began in 1995, is likely to continue for years to come.

Now is the time for business owners to prepare for the widespread power outages that typically accompany hurricanes. Including standby power in your emergency planning can make all the difference.

At Thompson Power Systems, you'll find the resources you need to sustain and/or restore your organization's critical functions - before, during and after the storm. Our highly qualified engineers will configure a system to meet your business requirements.

In addition to trouble-free rental, Thompson Power Systems offers a merchandising program specifically for power equipment purchases. With the solid backing of Cat Power Financing, qualifying customers can buy any new Caterpillar generator up to 600 kW at below-market interest rates.

Whether you decide to rent or buy, now is the time to do it. Contact our Power Systems professionals today for a FREE SURVEY of your power and temperature control requirements.

Generator Sets

- Standard and Sound-attenuated to 2000 kW
- Diesel, LP and Natural Gas
- Transformers to 2500 KVA
- Load Banks to 6000 kW
- Cable, Distribution and Switchgear

Plot the Path of the Storm

You can track the progress of a tropical disturbance as it moves across established parallels of latitude and longitude. The example storm plotted at the left is located at the junction of 31° North (of the equator) and 57° West (of the prime meridian). The symbol  signifies the storm has reached hurricane strength. Use  to denote a tropical storm and the letter "L" to denote a tropical depression.

2008 HURRICANE NAMES

POWER

your hurricane preparedness with

Contingency Planning

Don't wait until it's too late

Electrical power is the lifeblood of business - a fact that has taken on new significance in light of today's demand for online communications and 24/7 service. Without electricity, computers don't compute, copiers don't copy, freezers don't freeze, and perishables perish.

Electrical power is also one of the first steps to recovery after the storm. It provides the critical link to emergency shelter, medical care, communications and other public services.

There's nothing like an approaching hurricane to bring the need for emergency planning into sharp focus. Even a close call can leave you out of power - and out of business. That's why you'll be glad to know that trained professionals and dedicated resources are never more than a phone call away.

As a full service Caterpillar Power Systems distributor, Thompson Power Systems is able to meet immediate customer needs at a moment's notice with an extensive rental inventory of genuine Caterpillar and Olympian standby and prime power gensets as well as temperature control products.

Thompson Power Systems also offers Sullair Compressed Air Rentals to keep your compressed air system up and running, before, during and after the storm.

But, why wait until disaster threatens? With contingency planning, Thompson can guarantee your rental unit will be available when you need it - and you can enjoy peace of mind throughout the year.

Whether you're dealing with an emergency or planning a year in advance, renting standby power ensures you'll never be without it no matter what happens to your utility's power grid.

Contact Thompson Power Systems today for a **FREE SURVEY** of your temporary power, temperature control and compressed air requirements.
